

BENEFITS OF RAIL ENVIRONMENTAL

REDUCE EMISSIONS. CREATE EFFICIENCY. SAVE MONEY.

The most **environmentally sound way to move freight over land is by rail**. Railroads are four times more fuel-efficient than long-haul trucks and a single freight train is the equivalent of nearly 400 trucks.

As organizations look to achieve business sustainability goals and reduce their supply-chain carbon footprint, many are **adding rail as an environmentally responsible alternative to trucks**. By providing access to the freight rail network, OmniTRAX enables our customers to be **competitive globally in an environmentally friendly and sustainable way**.

A study by the Government Accountability Office found that **ROAD DAMAGE CAUSED BY A SINGLE 18-WHEEL TRUCK IS EQUIVALENT TO THE DAMAGE CAUSED BY 9,600 CARS**
